

February 2019 Star Chart for Honolulu, HI

How to use this star chart

The star chart shows the night sky above Honolulu on the 15th of the month at 10PM local time (HST). The constellations are labeled and their outlines will help you find them. Hold the chart overhead and rotate the page so the direction you are facing is at the bottom of the horizon circle. The center of the chart corresponds to the point directly overhead called the "zenith". The circle represents the horizon, with stars inside the circle above the horizon. Stars that are east of the horizon circle (blue background) are visible earlier in the month/evening. Those to the west are visible later.

Visible this month

Look for Mercury at mag. -0.5 30 minutes after sunset on the 26th. in Ursa Major Comet 41P/Wirtanen fades to 7th mag. as it leaves the inner solar system. Venus, Jupiter and Saturn (in order of decreasing brightness) appear in the predawn sky this month. Venus and Saturn are in conjunction on the 18th and Jupiter and the moon on the 27th. Fainter Uranus (5.8) and Mars (0.9-1.2) are 1 deg. apart between Pisces and Aries on the 12th.
