

March 2018 Star Chart for Honolulu, HI

How to use this star chart

The star chart shows the night sky above Honolulu on the 15th of the month at 10PM local time (HST). The constellations are labeled and their outlines will help you find them. Hold the chart overhead and rotate the page so the direction you are facing is at the bottom of the horizon circle. The center of the chart corresponds to the point directly overhead called the "zenith". The circle represents the horizon, with stars inside the circle above the horizon. Stars that are east of the horizon circle (blue background) are visible earlier in the month/evening. Those to the west are visible later.

Visible this month

In the evening twilight try to find Mercury just 5 degrees above and right of magnitude -3.9 Venus in the western sky. Mars, Jupiter and Saturn are arrayed across the ecliptic in the early morning sky. Comet C/2016 R2 (PANSTARRS) is magnitude 10-11 east of Perseus. Ceres arcs through the constellation Cancer.
