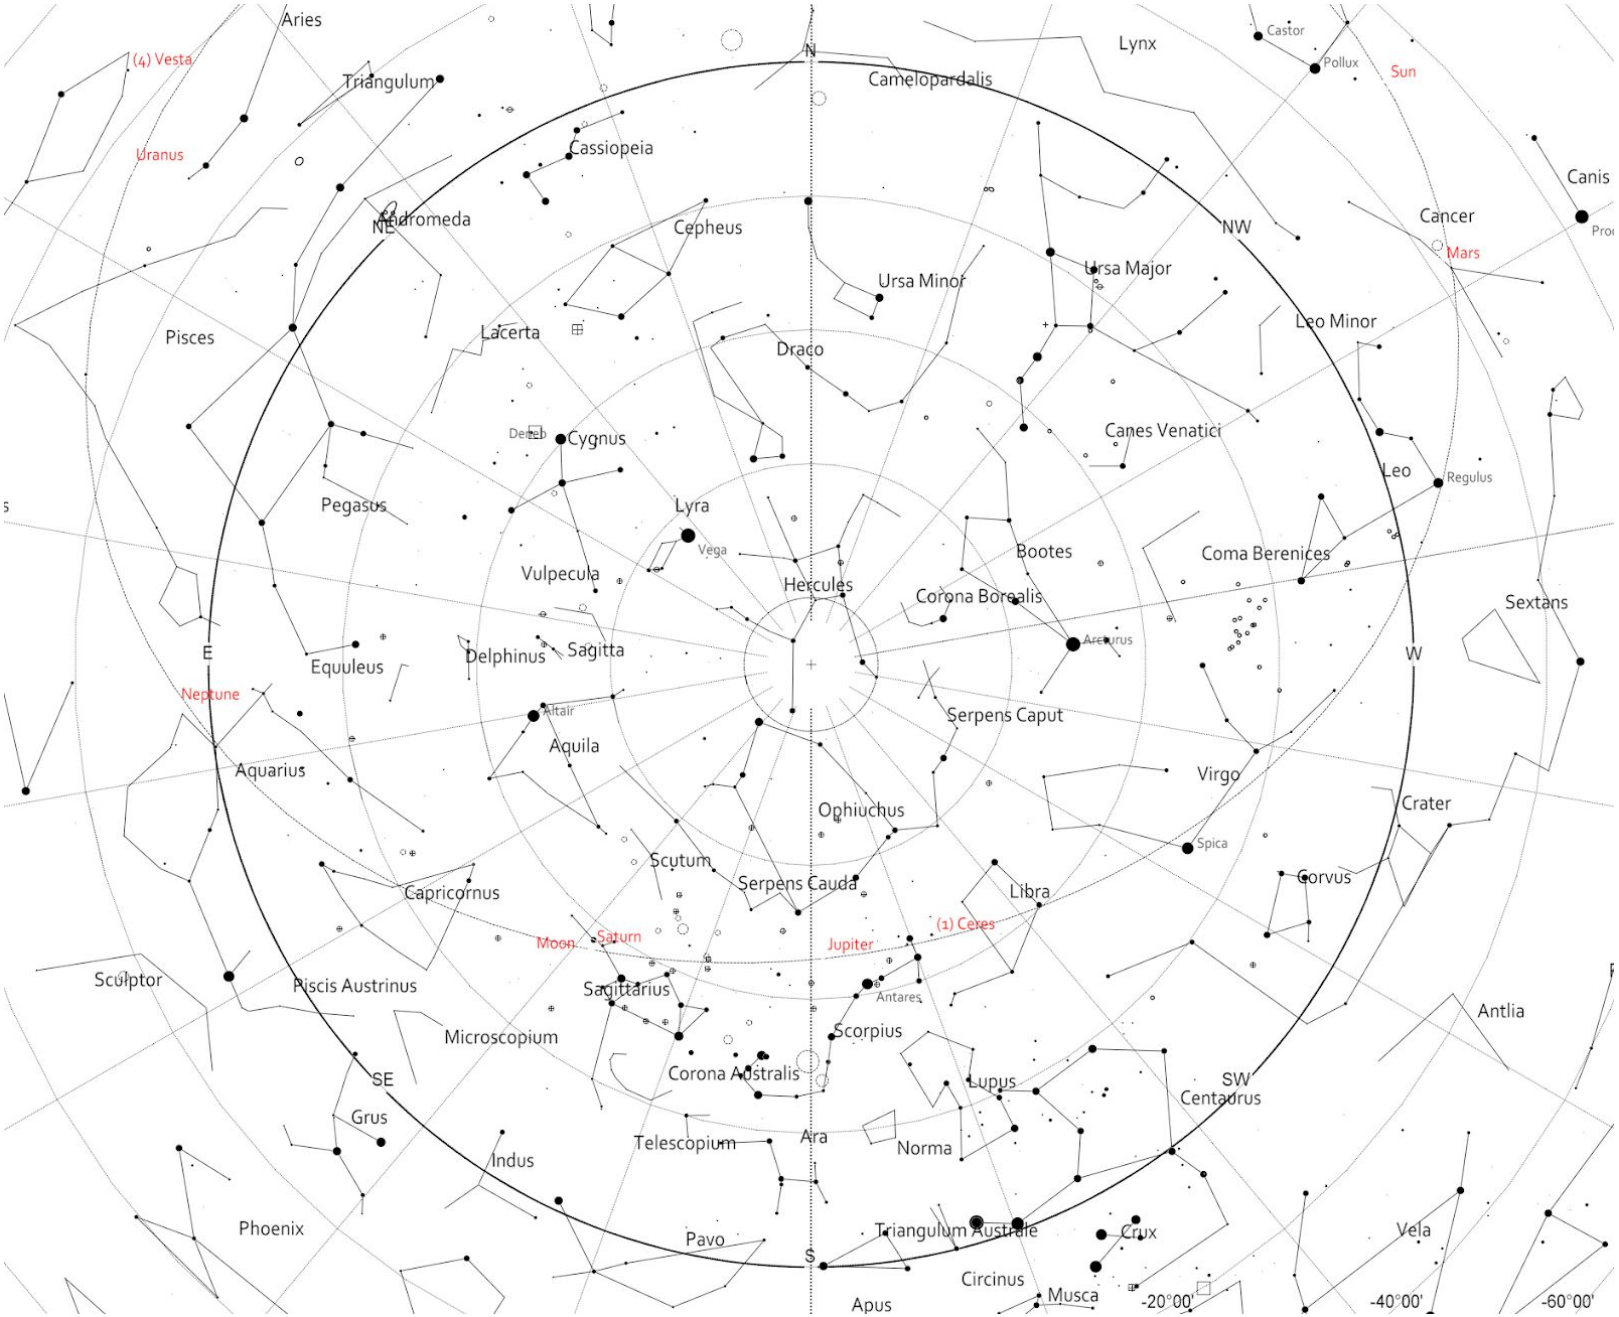
July 2019 Star Chart for Honolulu, HI



Stellar magnitude: 0 1 2 3 4

How to use this star chart

The star chart shows the night sky above Honolulu on the 15th of the month at 10PM local time (HST). The constellations are labeled and their outlines will help you find them. Hold the chart overhead and rotate the page so the direction you are facing is at the bottom of the horizon circle. The center of the chart corresponds to the point directly overhead called the "zenith". The circle represents the horizon, with stars inside the circle above the horizon. Stars that are east of the horizon circle (blue background) are visible earlier in the month/evening. Those to the west are visible later.

Visible this month

Jupiter dominates the southern sky at magnitude -2.5 in Ophiuchus while nearby Saturn is much dimmer at 0.1 in Sagittarius. Saturn reaches opposition on July 9. Uranus is a mag. 5.8 object in Aries while Neptune is visible in the wee hours at mag. 7.8 in Aquarius. The Southern Delta Aquarids peak on July 30 but may be seen from mid-July to mid-August.
