

August 2018 Star Chart for Honolulu, HI

How to use this star chart

The star chart shows the night sky above Honolulu on the 15th of the month at 10PM local time (HST). The constellations are labeled and their outlines will help you find them. Hold the chart overhead and rotate the page so the direction you are facing is at the bottom of the horizon circle. The center of the chart corresponds to the point directly overhead called the "zenith". The circle represents the horizon, with stars inside the circle above the horizon. Stars that are east of the horizon circle (blue background) are visible earlier in the month/evening. Those to the west are visible later.

Visible this month

Mars begins to fade after its brightest opposition since 2013 in July. The highlight of August is the moonless nights of the Perseid meteor shower over August 11th to 13th. Saturn, at mag. 0.1 lies just above the teapot's spout in Sagittarius with reddish Antares to the right and reddish Mars to the left. Aug. 14th - 16th features the waxing crescent moon with first Venus, then Jupiter nearby.
