

August 2019 Star Chart for Honolulu, HI

How to use this star chart

The star chart shows the night sky above Honolulu on the 15th of the month at 10PM local time (HST). The constellations are labeled and their outlines will help you find them. Hold the chart overhead and rotate the page so the direction you are facing is at the bottom of the horizon circle. The center of the chart corresponds to the point directly overhead called the "zenith". The circle represents the horizon, with stars inside the circle above the horizon. Stars that are east of the horizon circle (blue background) are visible earlier in the month/evening. Those to the west are visible later.

Visible this month

Jupiter dominates the southern night sky at magnitude -2.3 in Ophiuchus On the 20th the Galilean moons of Jupiter are all east of Jupiter. Saturn, shines in Sagittarius at mag. 0.2. This month Uranus can be found in Aries at mag. 5.8 and Neptune in Aquarius after midnight. The Perseid meteor shower peaks on Aug 13th but will be obscured by the full moon this year. Best to get up before dawn the days before the 13th.
