Astronomy 281   Homework 3 – Due 2/11/2014 – 10 pts

Name ______________________________

Write two clicker style questions from any of the previous lectures we have had up through the lecture on extremophiles. The question should be short and clear, hit an important concept in the lecture – potentially one that will have connections to other lectures, and can have no more than 5 choices for answer (A-E). You don’t have to have 5 choices however. Please also state which is the correct answer and write a sentence or two of what the answer is correct. You will be evaluated on how well your question gets to the important points of the lectures. The best questions might be used as a real clicker question in class for points, or possibly on the first exam.
